

Good day, I'm a Level Designer with 4+ years of experience, mainly in shooters, including competitive projects developed with pro-players' feedback.

Over the past several years, I've worked across PC and mobile projects in shooter and action-oriented genres, from competitive FPS and MOBA-shooters to an RPG/MMO project where I served as Senior/Lead Level Designer.

My experience covers the full lifecycle of level development: from defining high-level location vision and reference frameworks, through prototyping and whiteboxing, to iteration driven by playtesting, metrics, and cross-discipline feedback.

As a Lead Level Designer, I've built and maintained level design pipelines, authored internal standards, and coordinated closely with Game Design, Art, Narrative, Sound, and Engineering teams. I'm particularly motivated by iterative development: testing assumptions early, learning from player behavior, and refining levels until they feel intuitive, fair, and engaging.

I have hands-on experience building multiplayer maps and single-player spaces in Unreal Engine 5 and Unity, setting up gameplay logic, navigation, spawn systems, and interaction prototypes. Having worked on competitive shooters inspired by titles like Counter-Strike, Team Fortress 2, and Overwatch, I pay special attention to flow, sightlines, pacing, and player decision-making — especially in environments shaped by high-skill play.

Valve has always impressed me with the depth and thoughtfulness of its game design, as well as the high standard of both creative and system-oriented development.

I would be truly glad if my skills and perspective could contribute additional productivity and a fresh design viewpoint to the company. I have a strong passion for Level Design, I learn quickly, and I continuously aim to make my levels deeper, more systematic, and more thoughtfully constructed.

Thank you for your time and consideration. I would be glad to discuss how my skills and approach could fit within Valve's development culture.

Best regards,

Tolstikhin Anton.
